Add README

READMEs can be used as longer descriptions. [About READMEs](#)

Off ☐

Add .gitignore

.gitignore tells git which files not to track. [About ignoring files](#)

No .gitignore ▾

Add license

Licenses explain how others can use your code. [About licenses](#)

No license ▾

Create repository

3. Upload your file (index.html)

The screenshot shows the GitHub interface for a repository named 'test2' by user 'ywan2026'. The repository is public. The page includes navigation links for Code, Issues, Pull requests, Agents, Actions, Projects, Wiki, Security and quality, Insights, and Settings. Below the repository name, there are buttons for Pin, Watch (0), and Fork (0). The main content area has two cards: 'Start coding with Codespaces' with a 'Create a codespace' button, and 'Add collaborators to this repository' with an 'Invite collaborators' button. A blue banner section titled 'Quick setup — if you've done this kind of thing before' provides instructions for setting up the repository. It includes buttons for 'Set up in Desktop', 'HTTPS', and 'SSH', along with the repository URL 'https://github.com/ywan2026/test2.git'. Below this, it says 'Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).' The 'uploading an existing file' link is highlighted with a red box. At the bottom, there is a section titled '...or create a new repository on the command line' with a code block showing the commands to create a new repository.

Start coding with Codespaces
Add a README file and start coding in a secure, configurable, and dedicated development environment.
[Create a codespace](#)

Add collaborators to this repository
Search for people using their GitHub username or email address.
[Invite collaborators](#)

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#) <https://github.com/ywan2026/test2.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# test2" >> README.md
git init
git add README.md
git commit -m "first commit"
```

3. Upload your file (index.html)
